*Elevating roofs with hydraulic drive –  
developed by ACTION MOBIL  
Read the story in this journal*

1984

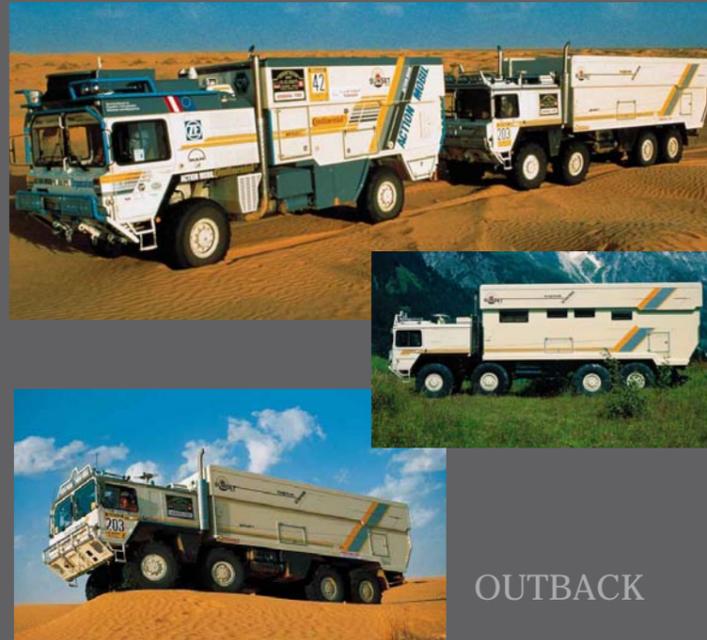

KSAR

1987

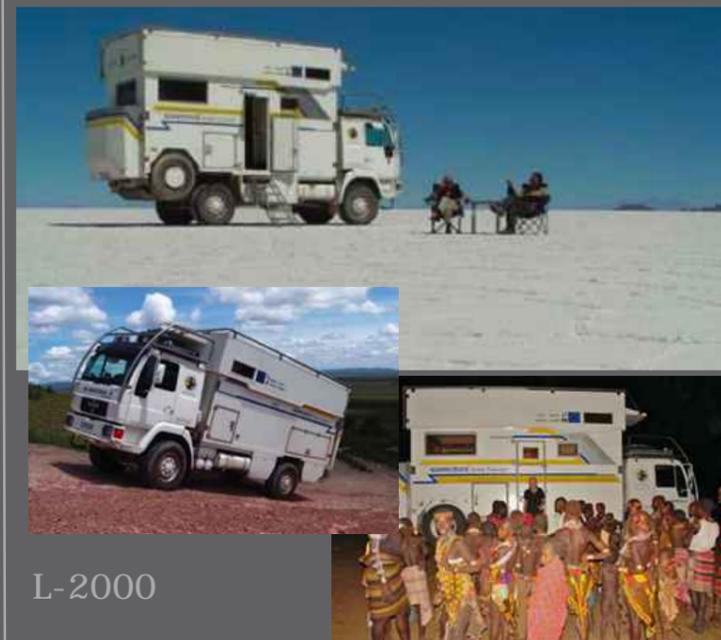

DOGON

1994

OUTBACK

1997

L-2000

It all started with the KASR HD, the first cabin with elevating roof in the European market.

With this innovation, ACTION MOBIL turned a new page in cabin construction. The basic idea was to create a cabin type that would allow low structural height and simultaneously a low centre of gravity for off-road trips.

In later models of the series DOGON and OUTBACK, these ideas were followed up consistently and the result was cabins that proved their worth also in rally competitions. Even 8 m long roofs were made possible. Right from the start, a hydraulic system was chosen for the elevating mechanism, since this technology is a lot more operation-proof than any electric system. If required, also loads are to be transported on the roof (see DOGON with roof garden). The hydraulic drive can handle transport of such diverse loads without problems.

*The story is almost 30 years old and still up to date in 2012. ...the original!*

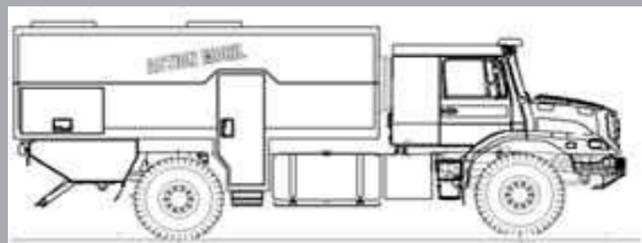

In the past few years, the cabins of most truck chasses have become higher and higher. Thus the idea and advantage of a body that would be as low as possible was counteracted. As early as 1997, ACTION MOBIL introduced a new application of the elevating roof with the series L-2000. The elevation height was extended thus creating a second level for the bedroom area. With this construction type, the total length of the vehicle can be reduced and the area gained in the elevating roof can house a spacious double bed. We also offer interior designs with a separate 3<sup>rd</sup> and 4<sup>th</sup> bed.

### KSAR HD 5000

The latest state of the art in a compact global cruise motor-home with elevating roof. When the elevating roof is lowered, all windows are covered burglar-proof – an additional advantage of the cabins with elevating roof.

Thanks to the low structural height of its cabin, the Mercedes-ZETROS chassis can carry an extremely compact expedition motor-home. For this chassis the model with elevating roof is the ideal choice!

*Airy room height just like in a proper residential building – an elevating roof makes it possible.*

*A combination of precious wood surfaces and stainless steel captivates by its look, as well as by its workmanship.*

*The kitchen equipment – nothing short of the dream of any professional or amateur cook.*

# ACTION MOBIL KS AR HD 5000

The ATACAMA interior concept, which was used also in the KSAR HD, provides a functional sanitary area in the front part of its cabin. The door lined with a mirror, closes off the living room. In different constellations, this door changes the area's functions from connecting corridor toward the cabin, to wardrobe, to closed toilet and shower cubicle.

Mobile in any direction: the motorcycle on the hydraulic lift, which at the same time serves as a lift for the spare wheel and the sand plates. Tied up in the storage room and easily accessible thanks to a pull-out device – the bicycles.
