PURE 5300

*ACTION MOBIL all-wheel motorhome
Compact in its dimensions
Low-priced equipment*

In order to make the decision of investing in an all-wheel motorhome easier the entry-level construction series PURE has been developed. In terms of technology and quality all PURE models meet the ACTION MOBIL standards. Technology and interior furnishing provide everything that is necessary for a basic equipment that makes sense. Modifications of the layout are possible only on a minor scale, however choice of colours and materials leave room for a lot of creativity, as can be seen in the photos of the interior furnishing.

This kitchen unit contains everything that is needed for a functional kitchen. Stainless-steel sink, induction hob and hi-tech oven, complemented by a sufficient number of drawers and a spacious ACTION MOBIL fridge.

The sanitary area is one of the most important elements in an expedition motorhome, especially in countries with poor hygiene standards. Therefore we have not economized on reasonable equipment in the PURE series.

A multi-functional cupboard with stackable containers and horizontal draw-outs.

PURE 5300

The PURE series has been derived from the popular ATACAMA layout. With its cabin lengths ranging from 3.8 m to 5.6 m this series meets any individual wish. The shortest model, the PURE 3800 can even be supplied for chasses below 7.49 t.

As can be seen from this furnishing variant, the choice of materials and the colour selection are the chief elements for generating a cosy living-room atmosphere. It is however the client's taste that matters most. If you wish, you may also seek advice from the management. Not every material is suited for use in an off-road motorhome and this is why client counselling based on long-standing practical experience plays an important role at ACTION MOBIL.

PURE 5300

A layout similar to that of the ATCAMA, however without the transverse bench, due to the shorter cabin length.

The bed, as big as the one at home, with sufficient storage facilities. The lounge seating group provides enough space for 4 persons. In addition to that, the table can be lowered electrically to make a second bed.

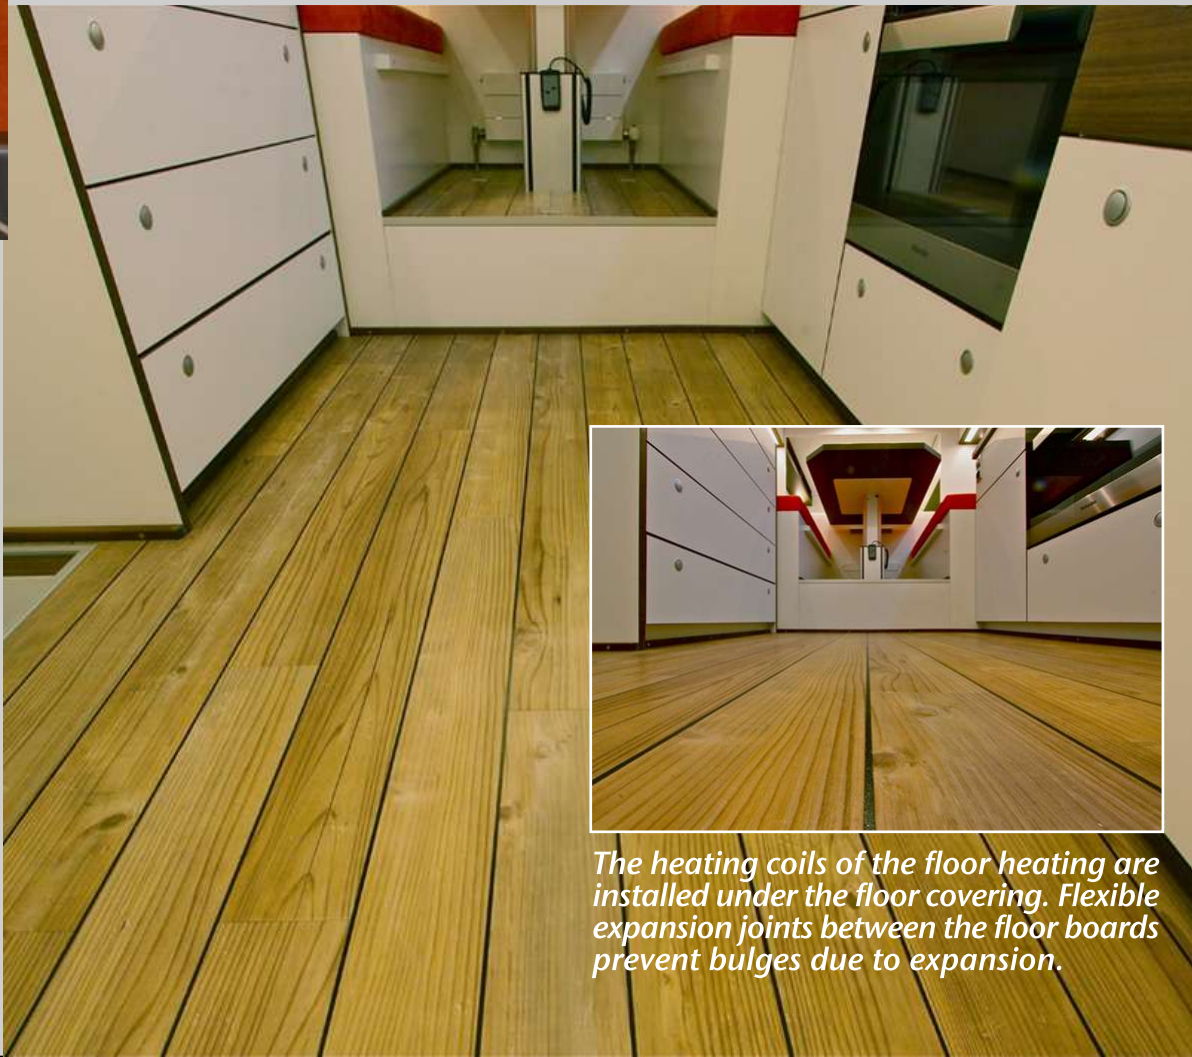

...but we can even make it more compact.

The ACTION MOBIL team will always strive to meet their client's wishes - for example the wish for even more compact cabin configurations for narrow, rocky terrain overgrown with bushes. Yet how to shorten the construction length without having to miss out on certain convenient features? ACTION MOBIL has resorted to an idea which was already realized back in 2005 in the legendary DESERT CHALLENGER: a bed that can be lowered electrically.

Wood makes for atmosphere and warmth.
... However, without a functional heating there would be no cosiness.

For almost thirty years ACTION MOBIL has been installing diesel-driven heating systems on warm water basis. Premium radiators, towel driers in the bathroom, as well as a floor heating are also being installed in the PURE series. This makes heating just as convenient as in your own home. It would be considerably easier and cheaper to install electrically heated towel driers and floor heating in connection with a blower heater. However, an extremely high electricity consumption would be an uncomfortable challenge when spending time high up north in winter. This is why also in this respect PURE offers technology at its finest, which provides security and comfort in regions away from civilization. It goes without saying that this system can be extended by an engine preheating.

The heating coils of the floor heating are installed under the floor covering. Flexible expansion joints between the floor boards prevent bulges due to expansion.

The expedition motorhome PURE 4500 HB with lifting bed will be presented at a trade fair for the first time at

ABENTEUER ALLRAD - BAD KISSINGEN (June 4 - June 7, 2015) at stand M 23

PURE 4500 HB

From now on, the popular cabins of the PURE series are available with an electrically driven lifting bed mounted above the seating group. This arrangement has quite a lot of advantages.

The cabin length can be shortened by 140 - 160 cm. Also the wheelbase will be considerably shorter, which makes the vehicle highly compact and agile. An advantage that should not be underestimated, especially in cities, in off-road terrain, on the ferry boat...

The seating group can be positioned in the rear and can therefore be bigger than the ordinary one. A big window in the rear wall makes the interior brighter and affords

a generous panoramic view. The 160 cm wide lifting bed reaches a level of comfort that has so far been reserved for considerably larger vehicles only.

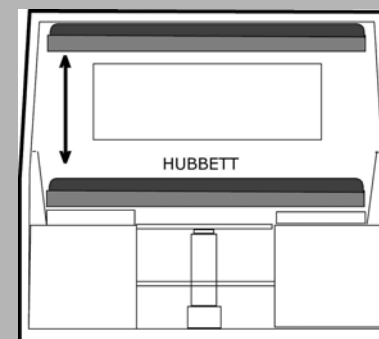

The first vehicle equipped with the novel lifting bed system has a cabin length of 4.5 m. A comparable cabin without a lifting bed would be 6.1 m long (+1.6 m). In this case the chassis would have to be fitted with a wheelbase of 4.5 m (+0.9 m). As is customary with ACTION MOBIL, all dimensions are variable and will be adapted to the individual wishes of our clients.

...an ACTION MOBIL with new dimensions!

The smallest among the big ones !

A well-appointed all-wheel motorhome for "Off-Road extreme"

The first vehicle equipped with the novel lifting bed system
